12 ECOLOGICAL INFORMATION

Information about elimination (persistence and degradability):

METHOD

Analysing method: See note below

Degree of elimination: > 80 %

Other information: The product is eliminated in wastewater treatment plants by physical and biological means.

Ecotoxicological effects: Polydimethylsiloxane degrades in soil abiotically to form smaller molecules. These in turn are either biodegraded in soil or volatilized into the air where they are broken down in the presence of sunlight. Under appropriate conditions, the ultimate degradation products are inorganic silica, carbon dioxide and water vapour. Due to the very low water solubility of this product, standard OECD protocols for ready and inherent biodegradability are not suitable for
